

## WHAT'S NEW IN RADAROPUS 1.39

### REPERTORY AND MATERIA MEDICA: BUG FIXES AND IMPLEMENTATIONS

- Help
  - Spanish help and welcome screen
  - For languages where help is not available, English help is shown
  
- New Qt Version
  - RadarOpus compiled with new version of QT library QT 5.2.1
  - RadarOpus on Mac compiled at 64 bit
  - RadarOpus on Mac now contains all dependent modules
  - The bug on taking screenshot on Mac is fixed by the new QT library
  
- Books
  - vva6 does not appear in the TOC anymore, only the more recent version vva4 appears;
  - integration of French and Spanish translations in Radar Concepts, Acute Diseases,
  - Dragos, Fonseca, Mateu First aid (only in live update, and final 1.39 DVD)
  - Many new books! (SEE BELOW)
  - Some of the new books will be available for free to all users **(LIST HAS TO BE ADDED)**
  - The installer has been modified to set in Radaropus.ini the correct Keynotes for Spanish language
  - Missing translation in the German version of Synthesis have been included
  
- Security
  - the current date used to verify that the evaluation period is expired is no longer read
  - Passport only enabled if one has corresponding wibu item
  - RadarOpus writes to the cmDongle the starting date of the evaluation period, if this is empty
  - **New feature to import case from encrypted XML (to be used by Synthesis app).**

➤ Bug fixes

- fix of a bug introduced in v.1.38: when you hover the mouse over a remedy you cannot see a picture of the remedy
- if you clicked on the analysis icon in the top bar and chose Analysis by families, you got message feature not ready, now it opens the sub-menu as in the analysis window
- if you applied analysis by families on an empty clipboard you had a program crash that now has been fixed
- fix error that occurred pressing F4, F5 and F6 in sequence

➤ Other

- A new message is given to advise to make a backup before a live update takes place
- in Bentley map, when one clicks on the icon of the book "Bentley soul & survival", the book in RadarOpus (btg3) is opened, if can be found, otherwise the link goes to the website as in previous versions
- **When printing a repertorization, also the repertorization notes are printed**
- **Materia medica are now readable also on low resolution screens (in previous versions the right part of all sentences was not visible)**
- **Bug fix in import repertory from excel when remedies have references to documents**
- The activator now writes to the key also in case the Archibel registration server is offline
- All menu items that show message "Not yet implemented" have been hidden
- Whenever RadarOpus crashes at startup, the next time it is started it ignores all settings in default.session
- First actions of the menu "Take" ("Take with intensity 1"... ) now correctly translated

➤ Concepts

- Radar Concepts are now available also in French and Spanish
- Fixed bug: open concepts, open tooltip that shows symptoms, click on a symptom, if the repertory is not already open and in the same language, that lead to a crash
- Show concepts in tooltips in the same language as the repertory
- New translations French and Spanish in books of Concepts: Servais, Petrucci, Zulian

➤ Options

- Options window now gives message to restart only when one has changed any option

#### ➤ Herscu module

- when you add a new segment, it is automatically the default segment;
- if you add symptoms to clipboards and the Herscu module is already open, when you switch back to it, the corresponding segments are added without having to close and re-open it
- sometimes the Herscu Analysis window did not consider all non-empty clipboards, now it always considers them all
- After taking a first symptom, when you see “press any key to search another symptom”, now you can select the second symptom. This did not work on Mac in previous versions
- The Help button in welcome screen now opens the Help page
- Put a symptom in three segments. Click on analysis icon. Remedies were shown as "present in 1 segment". This bug has been fixed
- Give a name to a segment, close circle, switch back to analysis, the name was lost. This bug has been fixed
- Take 2 symptoms in three segments. Then drag a symptom from one clipboard to another, that symptoms are not always moved in the RO clipboards. This bug has been fixed
- Add one symptom to first segment, click +, nothing happens, click again, second segment is added. This bug has been fixed
- Recalculations/refresh screens lacking. This bug has been fixed
- Now it is possible to create an empty segment, name it, close the circle, and not having it deleted
- When you have already given a name to a given segment you are not prompted again to name it when you add another symptom to it
- save a Herscu case, restore it, segments names are gone. Fixed
- it was impossible to delete a symptom. Fixed
- Fixed problem with accents in Herscu help page

#### ➤ Chinese version (Radarony)

- Chinese translations have been integrated in the installation program
- New Chinese translations have been integrated in RadarOpus
- The Chinese logo appears at startup in Radarony
- Radarony version is enabled when the Prof. To Repertory is enabled on the Wibu key
- 1 Chinese repertory + 3 Chinese books (available in a separate Exavault folder)

- Possibility to search in Chinese language
- Possibility to view references in two languages at the same time (before this was only possible for repertories - this is only used for the 3 new Chinese/English books, for the moment)
- Possibility to configure the program file as “Radarony” by adding line ChineseVersion=1 in [System] section of RadarOpus.ini file (in this configuration, the title of the program becomes Radarony and you see only the 4 Chinese books)
- Search a remedy in all open documents, did NOT work in Chinese
- When closing the "Welcome screen" the Chinese equivalent of "Do you want to see the welcome screen the next time you open RadarOpus” appears, but the YES and NO were still in English
- The Synthesis TE2009V only had the Full view
- Copy-paste now works also in complex search (4 search fields)
- Possibility to make a combined search of one Chinese word and one remedy
- Possibility to make a combined search of two Chinese words
- Clicking on the eraser icon, did NOT delete the Chinese characters in the simple search window. Fixed

## PATIENT FILE (WINCHIP) : BUG FIXES AND IMPLEMENTATIONS

- When the patient window was closed or a patient was deleted, the photo of the patient remained visible in the lower-left corner; fixed
- The Professional functions are enabled when the corresponding Wibu item is enabled on the Wibu key
- When saving an analysis from the “Save analysis” window, the notes inserted are now saved in the consultation’s text
- The group “National Health Service” has been removed from the Administrative window. It is however accessible from the Consultation window
- When removing a rubric from the clipboard, the patient window now knows the modifications and activates the save button
- The text in the grids’ cell, when too long, is now displayed on more lines
- Fixed an error happening while saving the title of the free fields
- Consultation list window
  - “Reason” and “Type” columns added

- At the first start, the grid in this window did not load correctly some values
- Fixed an error in “list of consultations” window: clicking over an analysis (in the “Analysis” cell) now opens always the actually clicked analysis
- Consultation text
  - it is now possible select more lines using the Shift+arrow keys
  - it is now possible to add an empty row in the middle of the text
  - Consultation text auto-save every minute
  - Loading of the consultation text is now faster
- List of data
  - Corrected a bug in the Lists of data when deleting the text written as search string
  - Patient’s “group” list of data added
  - Corrected and added various lists of data in veterinary’s “Personal information” Window
- Fixed some bugs in the importation from WinCHIP 3.x utility:
  - Lists of data are now correctly imported
  - The patient’s second name is now correctly imported
  - Other minor fixes
- Prescription tab
  - Only the column “Therapy name” is mandatory
  - In the column “Potency” it is now possible insert any value, even characters
  - Other bug fixes regarding the saving and showing functions.
- Research window
  - Window completely reviewed
  - Possibility to export results to excel file
  - Save a search and recall it
